

MANNOL Defender 7507

Innovative ester-containing HC-synthese engine oil for gasoline and diesel engines with and without a turbocharger, of both old and new brands and high mileage vehicles. Designed according to the requirements of European manufacturers.

Product properties:

- A balanced combination of Ester technology and HC base with an extended range of viscosity-temperature features ensures efficient and stable engine operation in all operating modes: during cold start, in urban and highway modes, under increased load (off-road and uphill driving, towing, driving with maximum load) and at high ambient temperatures;
- Great for active driving due to the high total base number (TBN), which also ensures optimal functionality even when using variable quality fuel (with sulfur content up to 500 ppm);
- HC ester-containing base combined with a unique additive package preserves engine power parameters throughout the entire interval between replacements;
- A unique anti-wear and anti-friction technology in combination with ester components and exceptionally durable oil film significantly increases the engine's service life even in start-stop systems and during cold start;
- The highest thermal-oxidative stability and excellent washing-dispersing properties effectively prevent against all types of deposits and maintain engine parts clean throughout the entire interval between replacements.

Intended for gasoline and diesel engines of a wide range of cars, light SUVs, vans and light trucks of European and other manufacturers.
Recommended for engines of Daimler and VW vehicles.
