

MANNOL Thread Seal Tape 9617

MANNOL PTFE Thread Seal Tape for sealing and repairing worn threads is tearproof and prevents thread seizure, since it does not stick or swell. It is resistant to oil and temperatures up to 260 °C. Adjustment, including limited turn back, is possible after use because the PTFE film formed while screwing does not harden and remains flexible. Length / Width / Thickness: 15 m / 19 mm / 0.075 mm.

For right-hand threads wind tightly right, for left-hand threads wind tightly left from the thread run-out in the direction of the thread so that the tape takes shape of the thread. Tear tape off at the end, remove possible projecting ends and press the tape on the thread.
